**NWDC Water Project:**

- Workmanship Issues – Comprehensive lead study found no additional leaks. Our corrosion engineer is doing a metallurgical analysis of the copper pipes from previous leaks to determine if the cause was electrical current or workmanship.
- Water Leaks – Centennial Water & Sanitation District is giving us access to daily SCADA for comparison with our meters. For April, CWSD meters matched RWSD-NWDC connection meters. We did identify several fire hydrants in Chatfield East, Chatfield Estates and TRIP that have been used. We are installing hydrant locks on all meters, and are trying to schedule a meeting with the South Metro Fire Station in Chatfield East to discuss their use of the hydrant.
- Douglas County – Moore Road/EVOC connection is complete. Preparing invoice for Douglas County for engineering, design and construction inspection services.
- Sanitary Sewer Service – Douglas County is kicking off a study of the feasibility of extending sanitary sewer service to northwest Douglas County. Initial focus will be on TRIP, EVOC and potentially Louviers. RWSD has been asked to be a partner in the discussions.
